PROFESSIONAL SUMMARY

Detail-oriented and self-driven full stack web developer with hands-on experience building and deploying real-world applications using React, Node.js, Express, and PostgreSQL. Completed a web development internship and multiple personal projects from scratch, including a deployed Civil Service Exam Reviewer, a gamified Study EXP Tracker, a Game Review App with third-party API integration, and a JWT-authenticated system. Eager to contribute to a collaborative development team, write clean and efficient code, and continue growing as a developer.

TECHNICAL SKILLS

Frontend: React.js, HTML5, CSS3, JavaScript (ES6+)

Backend: Node.js, Express.js, PHP, REST API Development, JWT, bcrypt

Database: PostgreSQL, MySQL, SQLite

Tools & Platforms: Git, GitHub, Vercel, Render, WordPress, Elementor, Arduino IDE

PROJECTS

CSE Reviewer App | *React · Node.js · Express · PostgreSQL · Vercel · Render*

- Built a full stack Civil Service Exam reviewer deployed to Vercel (frontend) and Render (backend).
- Implemented role-based authentication using JWT with an Admin panel featuring a regex-based question importer, manual add, and database management.
- Migrated database from SQLite to PostgreSQL for cloud compatibility and production deployment.

Study EXP Tracker | *React · Node.js · Express · PostgreSQL · JWT · bcrypt*

- Built a gamification app where studying earns experience points across three tracks: Developer, Gamer, and Anime.
- Implemented JWT authentication, bcrypt password hashing, EXP calculation system, and automatic level progression.
- Frontend built with React featuring real-time EXP progress bars and track cards; backen deployed on GitHub.

Game Review App | *React · Node.js · Express · SQLite · RAWG API*

- Developed a full stack game review platform integrating the RAWG Video Games API to fetch game data.
- Implemented SQL JOINS to relate reviews to games and users across multiple database tables.
- Built client-side routing with React for a multi-page single-page application experience.

Trash to Charge: Smart Plastic Bottle Recycling System | *C++ · Arduino · PHP · MySQL · HTML · CSS · JavaScript*

- Capstone project: built a hardware system using Arduino (C++) that converts plastic bottle deposits into mobile phone charging time.
- Developed a web dashboard using HTML, CSS, JavaScript, PHP, and MySQL for bin owners to monitor fill levels, system status, and receive alerts.
- Implemented data analytics features including bottle count tracking, earnings computation, and electricity cost analysis to determine profitability per bottle.

WORK EXPERIENCE

Web Developer Intern | Office Central Trading

January 2026 – April 2026 (4 months)

- Designed and developed the company's official website (officecentraltrading.com) using WordPress and Elementor, covering pages for Home, About, Products, Shop, Contact, Pricelist, and Blog.
- Improved overall UI/UX to create a more user-friendly experience aligned with the company's brand identity.
- Set up an e-commerce-style product catalog integrated with the company's Shopee store.

EDUCATION

Bachelor of Science in Information Technology

City of Malabon University

Graduated 2026
